

Code Review for car engine source code

REVISION HISTORY			
-------------------------	--	--	--

NUMBER	DATE	DESCRIPTION	NAME

Contents

Customer wished to subcontract the manual reviewing of source code against coding standards.
Three very strict coding standards were used.

During the work:

- single checklist for all standards was created (in fact, several checklist - for different C constructs);
 - features, which may be checked automatically were discovered;
 - scripts for automatic pre-review were implemented;
 - manual code review was performed;
 - report in format required by the customer was created.
